Created by the Embassy of France in the United States and the FACE Foundation, the Thomas Jefferson Fund supports cooperation among the most promising young French and American researchers, and foster forward-looking collaborative research that addresses the most pressing global challenges.

In support of the Make Our Planet Great Again Initiative launched by President Emmanuel Macron in June 2017 and with the support of the Partner University Fund, the Thomas Jefferson Fund is offering additional grants this year for research projects related to Earth System Science, Climate Change and Sustainability, and 3 fields: Humanities and Social Sciences (HSS), Science, Technology, Engineering and Mathematics (STEM), Science for Society (Interdisciplinary STEM-HSS projects).

The most innovative projects involving significant transatlantic mobility, collaborative research activities, organization of joint workshops or conferences, publication of joint articles, and participation of younger researchers (PhDs) will receive the highest priority.

The grant covers travel expenses between France and the US, accommodation costs and a part of the organizational costs of joint conferences or publications.

Partner researchers are encouraged to obtain « in kind » and/or « in cash » co-funding from their institutions or from other sources of funding to cover all other types of expenses necessary to the successful implementation of the joint research project.

Proposals must be jointly submitted by one American researcher and one French researcher at the beginning of their career, with mid- to long- term positions at a research or higher education institution in the United States or in France (post-doctorate level, assistant or associate professor, maître de conférences or chargé de recherche).
